The Biological and Environmental Research (BER) program provides fundamental science to underpin the business thrusts of the Department's Strategic Plan through its support of competitive and merit-reviewed research at universities, national laboratories, and private institutions. The Program advances the frontiers of environmental and biomedical knowledge in genomics, climate modeling, contamination and transport modeling, and non-invasive medical imaging, and biomedical engineering. The research is also designed to provide science in support of the Energy Policy Act of 1992.

Definition:

The Biological and Environmental Research (BER) program provides fundamental science to underpin the business thrusts of the Department's Strategic Plan through its support of competitive and merit-reviewed research at universities, national laboratories, and private institutions. The Program advances the frontiers of environmental and biomedical knowledge in genomics, climate modeling, contamination and transport modeling, and non-invasive medical imaging, and biomedical engineering. The research is also designed to provide science in support of the Energy Policy Act of 1992.

#### Target:

No Target

#### Definition:

Includes The Cost Of Cooperative Work With Non-Federal Entities; I.E., Any Work Performed By Doe Or Its Contractor Personnel Supported By A Cooperative Agreement Which Specifies The Contribution Of Each Party And Is Accompanied By A Cash Advance. See Doe 2200.6A, Chapter Ix, Reimbursable Work, Revenue, And Other Collections, For Additional Information Related To Cosponsored Work. The Contribution (Waiver) Of Added Factor And/Or Depreciation By Doe, Without The Contribution Of Direct Program Funds, Would Not Meet The Criteria For A Cooperative Funding Agreement. Only The Non-Federal Entity'S Portion Of The Costs Should Be Charged To Subprogram 60 50. The Detail Levels Of Subprogram 60 50 Correspond To The B&R Structure Utilized For The Doe Portion Of The Cooperative Funding Agreement; E.G., If Doe'S Portion Of The Costs Are Charged Against B&R Af7010100, 35Af70100 Or 39Af70100, The Non-Federal Entity'S Portion Would Be Charged Against B&R 6050Af700. Excludes The Costs Of Cooperative Work With Non-Federal Entities Chargeable To Program 65.

The Biological and Environmental Research (BER) program provides fundamental science to underpin the business thrusts of the Department's Strategic Plan through its support of competitive and merit-reviewed research at universities, national laboratories, and private institutions. The Program advances the frontiers of environmental and biomedical knowledge in genomics, climate modeling, contamination and transport modeling, and non-invasive medical imaging, and biomedical engineering. The research is also designed to provide science in support of the Energy Policy Act of 1992.

Program Goal: Office of Security & Safety Performance Assurance

Target: Multiple Targets

Definition: Includes costs to provide the physical and operational infrastructure at the national laboratories, the Nevada Test Site, production sites, and other DP sites required to conduct the scientific, technical, and manufacturing activities of the Stockpile Stewardship program. The RTBF mission is to ensure that the sites comprising the weapons complex are implementing the technologies and methods necessary to make construction, operation, and maintenance of DP facilities safe, secure, reliable and cost effective and that the right facilities and infrastructure are in place to manufacture and certify the 21st century nuclear weapons stockpile.

Includes all costs incurred for the stewardship of the vital field infrastructure maintained by the Office of Nuclear Energy, Science and Technology. This program ensures that the Department's unique facilities are available to meet the vital missions of the Federal government and that these assets are maintained in a safe, secure, environmentally-compliant and cost-effective manner, ensuring the protection of site workers, the public, and the environment. The Radiological Facilities Management program keeps unique DOE facilities and supporting infrastructure in a user-ready status. This includes reactors, hot cells, and other facilities needed to carry out advanced nuclear energy technology research and development, construct power systems for space exploration and national security missions, and produce, package and ship radioisotopes for medical and scientific applications.

Definition:

Includes all costs incurred for sitewide infrastructure needs to support the multi-program missions of the INL. The Idaho Facilities Management program supports National Energy Policy goals by maintaining and operating important facilities required for advanced nuclear energy technology research and development. The program manages site equipment, facilities, land, and support services that are not directly funded by other programs. Key activities conducted include assuring that all NE facilities meet essential safety and environmental requirements and are maintained at user ready levels. Other key activities include managing all special nuclear materials contained in these facilities and the disposition of DOE legacy materials under NE ownership.

Definition:

Seeks to identify and fund "bridging" research and development that falls between fundamental exploratory science and pre-commercial applied R&D by stimulating R&D that maximizes synergies among different research fields, technologies, investigator communities, and end-use applications. It also cuts across traditional energy end-use sectors by emphasizing distributed power generation applications for industrial and buildings systems, transportation and stationary power. This initiative expands on existing cooperative efforts between the Office of Fossil Energy and the Office of Energy Efficiency in areas such as natural gas-fueled turbine and fuel cell technologies, combined heat, power and cooling applications, hydrogen production, and carbon emission sequestration. This effort also involves extensive coordination with the Office of Science in pursuing follow-on research in areas critical to energy efficiency and clean energy development, such as basic biosciences, plant genetics, photo emission, heat transfer, new materials, catalysts and computational science.

Departmental Goal: OTHER PROGRAMS

Program Goal: Counterintelligence

Target: No Target

Definition: Provide the data and communications infrastructure (historically known as Advanced Data Processing or ADP) necessary to support the counterintelligence mission of the Department of Energy (DOE). This definition includes development, procurement, installation and operation of equipment and services required to the CI mission. Site-specific costs are not included in this category. For example, unclassified equipment and services costs associated with the daily operation of the local CI program including desktop computers, helpdesk support, network connectivity charges, local information assurance programs etc. required to provide baseline functionality (e.g. electronic mail, web access, business management) are not included. Services or equipment used to support specific projects, programs or applications that are not clearly core infrastructure components must be accounted for as part of the appropriate program cost. All HQ directed classified computing, networking, COMSEC and other associated equipment and services are included. Classified services or equipment used to support specific projects, programs or applications that are not clearly core infrastructure components must be accounted for as part of the appropriate program cost.

No Yes NNSA Information Infrastructure Program

**Long Title:** Information Infrastructure Program

**Departmental Goal:** OTHER PROGRAMS

**Program Goal:** Counterintelligence

**Target:** No Target

**Definition:** Provide the data and communications infrastructure (historically known as Advanced Data Processing or ADP) necessary to support the counterintelligence mission of the National Nuclear Security Agency (NNSA). This definition includes development, procurement, installation and operation of equipment and services required to the CI mission. Site-specific costs are not included in this category. For example, unclassified equipment and services costs associated with the daily operation of the local CI program including desktop computers, helpdesk support, network connectivity charges, local information assurance programs etc. required to provide baseline functionality (e.g. electronic mail, web access, business management) are not included. Services or equipment used to support specific projects, programs or applications that are not clearly core infrastructure components must be accounted for as part of the appropriate program cost. All HQ directed classified computing, networking, COMSEC and other associated equipment and services are included. Classified services or equipment used to support specific projects, programs or applications that are not clearly core infrastructure components must be accounted for as part of the appropriate program cost.

Target: No Target

Definition: Includes costs to provide 3-D, high-fidelity, physics, full-system simulation codes required for engineering, safety, and performance analyses of the stockpile. The campaign will provide the next generation of progressively higher performance software needed to implement virtual testing and prototyping. The campaign also develops, demonstrates, evaluates, assesses, and documents the predictive capabilities of the codes and their underlying models. These high-performance computational modeling and numerical simulation capabilities are necessary to support the science-based stockpile stewardship program in the absence of underground nuclear testing.

NUCLEAR WEAPONS STEWARDSHIP

Program Goal:

Directed Stockpile Work

Target:

Complete 95% of W76-1 Phase 6.3 activity; obtain W76-1 Phase 6.4 authorization and complete 25% Phase 6.4 activity.

Definition:

Includes costs for planning, preproduction, production and evaluation associated with the refurbishment of the W76. Planning and preproduction costs include those costs that are incurred to develop processes and procedures, procure or fabricate tools, complete process prove in activities, fabricate tool made samples, build early trainers and qualification units, complete pilot production, procure or fabricates testers and handling gear, and any other system related activity not captured through campaign or other DSW activities. Production costs include those that are incurred to procure, fabricate, and assemble material, piece-parts, components, and entities including Limited Life Component Exchange activities, which will be used to fulfill the directive requirements for completed refurbishments to be delivered to the stockpile. Evaluation/Surveillance costs include those costs that are incurred to procure, fabricate, and assemble material, piece-parts, components, and entities, which will be used for New Material Laboratory Tests (NMLT), Joint Tests Subassemblies (JTS) and Joint Tests Assemblies (JTA) in the New Material Flight Tests (NMFT) program, and to provide quantities of component samples for the shelf life program. These costs include the indirect production support, and management and administration cost allocation required to properly reflect the programs share of the production support, and administrative overhead charge.

#### Definition:

Management Includes costs for planning, preproduction, production and evaluation associated with the refurbishment of the W87. Planning and preproduction costs include those costs that are incurred to develop processes and procedures, procure or fabricate tools, complete process prove in activities, fabricate tool made samples, build early trainers and qualification units, complete pilot production, procure or fabricates testers and handling gear, and any other system related activity not captured through campaign or other DSW activities. Production costs include those that are incurred to procure, fabricate, and assemble material, piece-parts, components, and entities including Limited Life Component Exchange activities, which will be used to fulfill the directive requirements for completed refurbishments to be delivered to the stockpile. Evaluation/Surveillance costs include those costs that are incurred to procure, fabricate, and assemble material, piece-parts, components, and entities, which will be used for New Material Laboratory Tests (NMLT), Joint Tests Subassemblies (JTS) and Joint Tests Assemblies (JTA) in the New Material Flight Tests (NMFT) program, and to provide quantities of component samples for the shelf life program. These costs include the indirect production support, and management and administration cost allocation required to properly reflect the programs share of the production support, and administrative overhead charge.

### Definition:

Includes costs for planning, preproduction, production and evaluation of weapons in the enduring stockpile. Planning and preproduction costs include those costs that are incurred to develop processes and procedures, procure or fabricate tools, complete process prove in activities, fabricate tool made samples, build early trainers and qualification units, complete pilot production, procure or fabricates testers and handling gear, and any other system related activity not captured through campaign or other DSW activities. Production costs include those that are incurred to procure, fabricate, and assemble material, piece-parts, components, and entities including Limited Life Component Exchange activities, which will be used to fulfill the directive requirements for delivery of weapons to the stockpile. These activities include performing assembly and disassembly workload, not included as part of the dismantlement/disassembly program, for the enduring stockpile; and provide kits and other support to the DoD for work performed at depots. Includes costs associated with safety studies and evaluation activities to assess the safety and reliability of the weapons systems. Evaluation/Surveillance costs include those costs that are incurred to procure, fabricate, and assemble material, piece-parts, components, and entities, which will be used for Stockpile Laboratory Tests (SLT), Joint Tests Subassemblies (JTS) and Joint Tests Assemblies (JTA) in the Stockpile Flight Tests (SFT) program, perform routine surveillance activities on nuclear and non-nuclear components, and conduct significant findings investigations. These costs include the indirect production support, and management and administration cost allocation required to properly reflect the programs share of those activities.

**Definition:** Includes costs for planning, preproduction, production and evaluation of weapons in the enduring stockpile. Planning and preproduction costs include those costs that are incurred to develop processes and procedures, procure or fabricate tools, complete process prove in activities, fabricate tool made samples, build early trainers and qualification units, complete pilot production, procure or fabricates testers and handling gear, and any other system related activity not captured through campaign or other DSW activities. Production costs include those that are incurred to procure, fabricate, and assemble material, piece-parts, components, and entities including Limited Life Component Exchange activities, which will be used to fulfill the directive requirements for delivery of weapons to the stockpile. These activities include performing assembly and disassembly workload, not included as part of the dismantlement/disassembly program, for the enduring stockpile; and provide kits and other support to the DoD for work performed at depots. Includes costs associated with safety studies and evaluation activities to assess the safety and reliability of the weapons systems. Evaluation/Surveillance costs include those costs that are incurred to procure, fabricate, and assemble material, piece-parts, components, and entities, which will be used for Stockpile Laboratory Tests (SLT), Joint Tests Subassemblies (JTS) and Joint Tests Assemblies (JTA) in the Stockpile Flight Tests (SFT) program, perform routine surveillance activities on nuclear and non-nuclear components, and conduct significant findings investigations. These costs include the indirect production support, and management and administration cost allocation required to properly reflect the programs share of those activities.
